

API Waiver Hot Rolled Steel

Hot rolled steel is a very specific product that possesses very uncertain characteristics. The color variations range from moderate to dramatic thus making it nearly impossible to achieve a perfect color match between separate shapes and pieces (even when they are from the same batch). The finished tolerances for hot rolled steel are much greater than those for cold rolled steel.

Customers should expect and be prepared for a certain amount of color variation and understand that guarantees of finish, whether it is light or dark, can unfortunately not be made for it all depends on the batch. For a visual reference, please see page 2 of this document.

Please sign and date this letter as acceptance to the before mentioned terms and fax back to 813.925.1414 or email to info@americanproducts.com.
